Lab Observations

EXPERIMENT - 3

Design a CPU scheduling program with C using First Come First Served technique with the following considerations.

a. All processes are activated at time 0.

b. Assume that no process waits on I/O devices

PROGRAM:

```
#include <stdio.h>

int main()
{
   int n, i;
   int bt[20], wt[20], tat[20];
   float avg_wt = 0, avg_tat = 0;

   printf("Enter number of processes: ");
   scanf("%d", &n);

   printf("Enter burst time for each process:\n");

   for(i = 0; i < n; i++)
```

```
{
    printf("P%d: ", i + 1);
    scanf("%d", &bt[i]);
}

wt[0] = 0;

for(i = 1; i < n; i++)
{
    wt[i] = wt[i - 1] + bt[i - 1];
}

for(i = 0; i < n; i++)
{
    tat[i] = wt[i] + bt[i];
    avg_wt = avg_wt + wt[i];
    avg_tat = avg_tat + tat[i];
}

printf("\nProcess\tBurst Time\tWaiting Time\tTurnaround Time\n");

for(i = 0; i < n; i++)
{
    printf("P%d\t%d\t\t%d\t\t%d\n",
          i + 1, bt[i], wt[i], tat[i]);
}
```

```
    avg_wt = avg_wt / n;
    avg_tat = avg_tat / n;

    printf("\nAverage Waiting Time = %.2f", avg_wt);
    printf("\nAverage Turnaround Time = %.2f", avg_tat);

    return 0;
}
```

OUTPUT:
